

HARD DRIVE DESTRUCTION SERVICES

LET ARCHIVE DATA SOLUTIONS HELP YOU PROPERLY DESTROY YOUR HARD DRIVES, SAFEGUARDING THE INTEGRITY OF YOUR CORPORATE INFORMATION.

ON-SITE DESTRUCTION

Archive Data personnel will arrive at your facility and once your team briefs us on the specifics, we take it from there. You can remain as involved as you want in the process. We know you are busy. Our goal is to handle the project and let you stay focused on more pressing matters.

Our team will perform a dual-verification process of data eradication. This means that we build an audit list of all drives or tapes that are meant for eradication and an audit list of the drives and tapes that were eradicated. That way your team has clear visibility that nothing was missed during the process and more importantly, you have documented proof of the exact work done with the Certificate of Destruction provided.

LEVEL 1 SERVICES

- EPA Complaint
- Zero Landfill Policy

OFF-SITE SERVICES

- Secure Transport
- Optional GPS Tracking
- Immediate Scheduling
- Secure Shred
- Serial Number Capture
- Serial Number Destruction Report
- Certificate of Destruction
- EPA Complaint
- Zero Landfill Policy

OFF-SITE DESTRUCTION

Off-site destruction services can provide an extra layer of protection. The hard drives are audited on-site -- you receive a list of the drive serial numbers to be eradicated. These drives are then sent via secure transport to our facility. Upon arrival at our secure facility, a second audit is performed. So now you have the first audit to show exactly which drives left your facility and a second audit to show that each of these drives are now located in our facility and awaiting your final confirmation before any eradication work begins. Upon your confirmation to proceed, the eradication work begins and you are provided with a final certificate of data destruction.

This extra verification done during off-site eradication provides you with two key things: time and separation. Having the assets physically separated from your environment makes the process much smoother as it will be easier for you to recognize any discrepancies. You have as much time as you need to verify that those are indeed that drives that you intended to send out for eradication. The drives will be held in our secure facility untouched until you confirm the serial number audit list and verify that our team should commence with the eradication of the data on those drives.
