

## PROTECT YOUR BUSINESS WITH DATA CENTER CLEANING SERVICES

**Dirt, debris, and other contaminants are the leading cause of corrosion and equipment failure in high-performance data center environments, causing losses of tens or even hundreds of thousands of dollars per minute.**

**Traditional maintenance and janitorial staffs lack the specialized training and equipment to properly clean your data center, and can often cause added harm by using cleaners that react negatively to anti-static floor properties. Archive Data Solutions knows that it takes the right personnel, equipment, and methods to safely remove the contaminants that could threaten your business.**

### Personnel

Archive Data Solutions sends only experienced, trained personnel knowledgeable about the environmental properties to properly clean your facility. Our technicians know that the right equipment and methods make the difference.

### Equipment and Methods

We use only high-quality equipment specified for cleanroom environments such as ULPA-filtered vacuums. All chemical cleaners used on your floor surfaces are pH neutral and static dissipative to maintain floor material integrity.

### Environmental Testing

Archive Data Solutions service technicians conduct pre- and post-clean tests for sub-floor particle conditions, ferrous metal levels (magnetic shavings), concrete seal integrity and above-floor and floor surface dust and soil ratings. The United States Federal Standard 209E (now ISO 8), establishes maximum particulate levels for cleanroom environments, establishing ranges where critical equipment could be damaged. Our post-clean tests demonstrate the results of your data center cleaning to ensure compliance within those guidelines.

**ONE PARTNER, MANY SOLUTIONS**

- End of Life Asset Disposition
- Media Buyback
- Secure Data Transport
- Data Eradication
- Secure Data Destruction
- Compliant IT Recycling
- Data Center Cleaning
- Power and Cooling Solutions
- Asset Redeployment
- Media Asset Management

For more information about the process and testing methods of our data center cleaning services, contact one of our service specialists, and ask for our sample Data Center Contamination Control assessment report.

**Let our experience and solutions create a model of efficiency for your data center. CONTACT ONE OF OUR SERVICE SPECIALISTS TODAY!**
