

READY TO CUT YOUR CLUTTER FOR GOOD?

Whether on-site or off-site, our **Media & Data Destruction and Asset Disposition Services** protect the integrity of your information and provide secure and convenient disposal.

SECURE DATA & MEDIA DESTRUCTION AND ASSET DISPOSITION SERVICES

Every data center accumulates tapes and equipment that are no longer in use, but still contain sensitive corporate data. Archive Data Solutions can help you properly destroy or dispose of tapes and end-of-life equipment, safeguarding the integrity of your corporate information.

Our comprehensive destruction services can be tailored to fit your corporate audit and security policies and are compliant with the Department of Defense, the Environmental Protection Agency, and NIST guidelines for e-waste disposal.

Our Asset Disposition Services allow you to reduce overall end-of-life costs for electronic assets while aligning with e-waste programs that follow environmental standards and key compliance regulations.

MEDIA & DATA DESTRUCTION SERVICES

Media Destruction: The physical destruction of tape, media, equipment, hard drives or other corporate assets. This can occur on-site or at our secure off-site service location.

Data Destruction: Can be accomplished in several ways: degaussing of media, hard drive sanitization, or total asset decommissioning. Our processes erase data without destroying the asset itself.

Tier 3 On-Site Eradication for Servo-Track Media: Degaussing LTO media destroys the servo-tracks, rendering the tape unusable for buyback or redeployment. Our on-site eradication service fully erases the data, leaving the tape deployable for future application.

*** On-site asset destruction and eradication can be performed on all media, including LTO Ultrium tape.*

ASSET DISPOSITION SERVICES

Recycling: Put your recycling to work for you. Even with free recycling, used electronics contain substances such as lead and mercury that domestic recyclers will not process for free. We'll identify the value in your disposed assets up front and create a program to pass that value back to you.

Data Destruction Recycling Vehicles (DDRVs): DDRVs can safely and cost-effectively destroy electronic assets with sensitive information at your facility. For added protection, removable media can be incinerated off premises to eliminate the possibility of forensic recovery.

Demanufacturing: Our demanufacturing process recycles 98.5 percent of all material collected. All work is done domestically at facilities rated to ISO 14001 environmental standards.

Asset Management: Optional asset management services sanitize, refurbish and remarket e-waste items like computers, drives and network equipment in exchange for credit toward future purchases. Or, refurbished items can be deployed in your operations, reducing total cost of ownership.
